

Cable Ladder Rack Adjustable Rung *CLAR Series*

Adjustable ladder rung designed to add flexible cable support points in ladder rack systems.

Key Features and Benefits

- Steel construction provides durable cable support and maintains load performance within ladder rack systems.
- Adjustable design allows custom rung placement to match cable bundle sizes and layout requirements.
- Adds additional support points to improve cable distribution and reduce sag in high-density installations.
- Secures in place to maintain stability under heavy cable loads.
- Designed for quick attachment to most cable ladder and runway systems.
- Improves cable routing flexibility without modifying existing ladder rack sections.
- Compatible with a wide range of ladder rack systems and support structures.
- Ideal for retrofit applications where additional cable support is required.
- TAA-compliant, manufactured in North America supports government procurement requirements and ensures consistent quality.
- Black powder coat finish (GREENGUARD, TSCA, RoHS compliant) supports environmental and durability requirements.

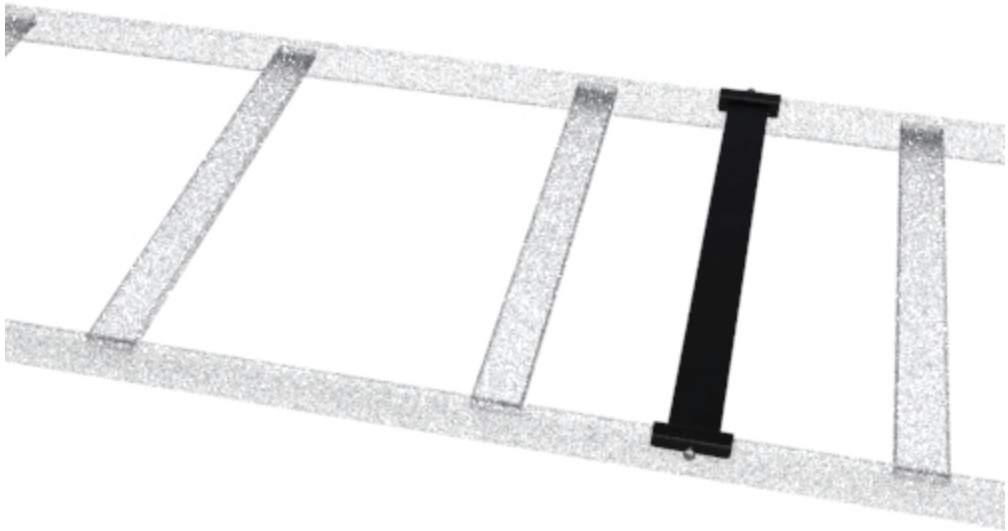

The CLAR Series adjustable ladder rungs provide a flexible solution for adding cable support within ladder rack systems. By allowing custom rung placement, they help optimize cable routing, improve load distribution, and support high-density cable bundles.

Designed for easy installation, these rungs integrate seamlessly with existing ladder rack systems, making them ideal for both new installations and retrofit applications.

Gallery

Part No.	Fits		Overall Dimensions		
	Ladder Width	Height	Internal Width	External Width	Depth
CLAR12BK	12.00	0.44	10.98	12.28	2.25
CLAR18BK	18.00	0.44	16.98	18.28	2.25
CLAR24BK	24.00	0.44	22.98	28.28	2.25

Where the CLAR Series Works Best

- Data centers and telecom rooms
- Network and structured cabling installations
- High-density ladder rack systems
- Retrofit ladder rack applications
- Installations requiring additional cable support

Best Applications for the CLAR Series

- Adding additional support points for large cable bundles
- Customizing rung spacing for non-standard cable layouts
- Reducing cable sag in long ladder rack runs
- Improving cable organization and load distribution
- Enhancing existing ladder rack systems without replacement
